EXECUTIVE PROFILE & CV SUMMARY

Accomplished AI Engineer, Technical Leader, and Computational Mathematician with extensive experience architecting and deploying enterprise-scale Generative AI pipelines, multi-agent autonomous platforms, and cloud-native machine learning infrastructure. Proven capability to transform legacy and complex systems into high-impact operational enterprise solutions, endorsed by senior client executives. Strong background spanning AI architecture at DXC Technology, digital transformation consulting at IDOM, and knowledge graph engineering at the Ontology Engineering Group. Holds a Master's in Applied & Computational Mathematics (UC3M) and a Bachelor's in Mathematics & Computer Science (UPM, GPA 9.4/10 with 14 Honourable Mentions).

Key Strengths & Core Competencies

- **AI & Agentic Systems Architecture:** Multi-agent orchestration (Google ADK, Microsoft AutoGen, Agent2Agent, MCP), long-context LLMs, deterministic/schema-first data extraction (Pydantic v2), RAG, Docling, PyMuPDF.
- **Enterprise Engineering & Infrastructure:** Microservices & cloud architecture (Azure OpenAI, Azure IoT Hub, Stream Analytics, Kubernetes, Docker, Traefik, PostgreSQL, CI/CD, DevOps).
- **Data & Applied Mathematics:** Knowledge graphs (RDF, SPARQL), NLP (BERT), mathematical modeling, statistical analysis, and continuous optimization.
- **Technical Leadership & Stakeholder Impact:** Proven leadership leading cross-functional developer teams, driving >95% operational time savings on RFP analysis, optimizing critical compliance tools (Auto SOX), and earning high praise from C-level/Head stakeholders for proactive problem solving and communication.

EXECUTIVE ENDORSEMENTS & RECOMMENDATIONS

Andrés Cabrera López – Head of Digital Delivery, Ferrovial

Recognized for taking complete technical ownership of the Auto SOX product in a highly deficient state, restructuring and optimizing it into a fully operational and reliable solution. Demonstrated exceptional leadership, proactive problem-solving, and solvent stakeholder communication, building direct trust with the project sponsor and key executives.

Andrés Reeve Crespo – Internal Control Manager, Ferrovial

Praised for high technical and functional solvency in internal control automation, translating complex requirements into stable, audit-aligned solutions. Proactively introduced out-of-scope enhancements that improved evidence traceability and operational efficiency, demonstrating total reliability during peak SOX compliance cycles and facilitating seamless business adoption.

COVER LETTER

Dear Hiring Team / HR Manager,

I am writing to express my strong interest in senior AI Engineering and AI Solutions Architecture positions. With an extensive background in applied mathematics, computer science, and enterprise AI delivery, I specialize in designing autonomous multi-agent systems, deterministic LLM pipelines, and production-grade AI platforms that drive measurable business impact.

As AI Engineer & Technical Leader at **DXC Technology**, I led the end-to-end architecture and deployment of enterprise Generative AI pipelines and automated auditing systems. For Ferrovial's **Auto SOX** platform, I spearheaded the technical delivery using Google ADK to analyze evidence against control requirements, turning a complex system into a production-grade solution. My leadership and functional solvency on this initiative earned strong endorsements from Ferrovial executives Andrés Cabrera López (Head of Digital Delivery) and Andrés Reeve Crespo (Internal Control Manager). Additionally, by automating RFP analysis with schema-first extraction and long-context LLMs, my team achieved >95% operational time savings across 320+ requirements with 100% precision. I also architected agentic traffic management platforms with MCP and managed multi-agent systems powered by Microsoft AutoGen and Azure OpenAI GPT-4o.

Previously at **IDOM**, I developed Digital Twins combining Autodesk Tandem with Azure IoT/ML, engineered BERT NLP classifiers, and built automated data ingestion pipelines for SAP integrations. My earlier research at the Ontology Engineering Group focused on semantic web technologies and knowledge graph generation.

I hold a Master's in Applied & Computational Mathematics from UC3M (awarded the Logicalis Innovation Challenge Most Innovative Project 2023) and a Bachelor's in Mathematics & Computer Science from UPM (GPA 9.4/10 with 14 Honourable Mentions).

I look forward to discussing how my experience in agentic orchestration and enterprise LLM engineering can contribute to your team. Thank you for your time and consideration.

Sincerely,

Fernando Bellido Pazos
